Quick review

Open MPI versioning
Open MPI versioning

• Open MPI uses “A.B.C” version number triple
• Each number has a specific meaning:
  
  A  This number changes when backwards compatibility breaks
  B  This number changes when new features are added
  C  This number changes for all other releases
Definition

Open MPI vY is *backwards compatible* with Open MPI vX (where Y>X) if:

- Users can compile a correct MPI / OSHMEM program with vX
- Run it with the same CLI options and MCA parameters using vX or vY
- The job executes correctly
What does that encompass?

- “Backwards compatibility” covers several areas:
  - Binary compatibility, specifically the MPI / OSHMEM API ABI
  - MPI / OSHMEM run time system
  - mpirun / oshrun CLI options
  - MCA parameter names / values / meanings
Version Roadmaps
v3.0.x (Prior stable)

- Release managers
  - Brian Barrett, AWS
  - Jeff Squyres, Cisco

- Immanent release: v3.0.5
  - November 2019
  - *Maybe* one more release…?

- Maintenance mode
  - No new features for life of series

- Major features
  - MPI_THREAD_MULTIPLE support by default
v3.1.x (Prior stable)

• Release managers
  § Brian Barrett, AWS
  § Jeff Squyres, Cisco

• Immanent release: v3.1.5
  § November 2019
  § *Maybe* one more release…?

• Maintenance mode
  § No new features for life of series

• Many usability features over 3.0.x
v4.0.x (Current stable)

- Release managers
  - Howard Pritchard, Los Alamos National Lab
  - Geoff Paulsen, IBM
- Current release: v4.0.2
  - November 2019
- Lots of bug fixes and performance improvements
- Big changes:
  1. Removed MPI-1 APIs not prototyped in mpi.h by default
  2. IB support now via UCX
  3. ABI compatible with 3.x
  4. MPIR usage deprecated
Deprecation notice: MPIR

- MPIR interface is used internally to launch / attach tools and debuggers
- The maintainer for Open MPI’s MPIR is retiring!
- Initially announced at SC’17 BOF:
  - Unless someone else takes over, this is the plan:
    - Deprecation notice in NEWS in early CY2018
    - User runtime warnings in mid/late CY2019 (v4.0.0)
    - Removal in CY2020 (replaced by PMIx-based tool support)
v5.0.x (Future)

- Still under active discussion
  - [https://github.com/open-mpi/ompi/wiki/5.0.x-FeatureList](https://github.com/open-mpi/ompi/wiki/5.0.x-FeatureList)
- Some potentially contentious issues:
  - Remove the openib BTL
  - Remove C++ bindings
  - Remove support for ancient gfortran
  - Remove MPI-1 / MPI-2 deleted interfaces
  - Remove MPIR
  - Break ABI compatibility with v3.x / v4.x
  - Make PMIx a first-class internal API
  - Remove support for PMI-1, PMI-2
The role of PMIx

• PMIx has effectively replaced much of Open MPI’s runtime system (ORTE)
  ▪ Apps directly depend on PMIx
• ORTE still exists
  ▪ Only used with mpirun / mpiexec (in any environment)
  ▪ Typical for ssh-based launching for unmanaged environments
• Open MPI still contains an embedded copy of PMIX
  ▪ But also supports compiling against an external PMIx
How to debug PMIx issues?

- PMIx has two sides:
  - Server (infrastructure)
  - Client (MPI apps)
PMIx logging variables

- DIR is “client” or “server”
  - This one gives general information:
    - PMIX_MCA_pmix_DIR_base_verbose
  - These give specific types of information:
    - PMIX_MCA_pmix_DIR_get_verbose
    - PMIX_MCA_pmix_DIR_connect_verbose
    - PMIX_MCA_pmix_DIR_fence_verbose
    - PMIX_MCA_pmix_DIR_pub_verbose
    - PMIX_MCA_pmix_DIR_spawn_verbose
    - PMIX_MCA_pmix_DIR_event_verbose
    - PMIX_MCA_pmix_DIR_iof_verbose

- Set via environment variable
  - mpirun --x \ PMIX_MCA_pmix_client_base_verbose=100 …

- Or PMIx site-wide config
  - $prefix/etc/pmix-mca-params.conf
UTK Open MPI Activities

George Bosilca
University of Tennessee
SPC: MPI_T Software Performance Counters

- Similar to PAPI counters but exposing internal information not available through other means
  - Out-of-sequence messages, time to match, number of unexpected, instant bandwidth, collective bins
- Can be configured to expose counters into a jobid shared file (XML + binary)
  - PMIx plugins to gather or monitor online the state of the job
  - Can detect deadlocks or pinpoint slowdowns in different metrics (such as message rate or bandwidth)
Threading

- Released Multirate benchmark
  - Different communications patterns with different workloads
  - Between different entities (threads or processes)
  - Multiple communicators
  - Enforced thread/process binding
Threading

- Houston we have a problem!

Haswell, IB 100G EDR
HAN: Adaptive Collective communications framework

- More complex architectures demand more complex collective frameworks
  - Time for a refresh of the tuned collective framework
- Architecture aware (ADAPT)
  - Hybrid Architecture
- Shared Memory (SM$^2$)
  - One-sided communications
- Noise Reduction (FUTURE)
- Overlap needed for non-blocking collectives

![Graph showing Overlap (%) for different message sizes (64KB, 128KB, 256KB, 512KB, 1MB, 2MB, 4MB) for Libncb, No Progress Thread, Libncb, With Progress Thread, Adapt No Progress Thread, and Adapt With Progress Thread.](chart.png)
HAN: Adaptive Collective communications framework

MPI_Bcast on 4K processes on Shaheen

**Graphs:**
- **Small message**
  - Message size (bytes) vs. Time (us)
  - Data points for Cray, OMPIL_DEFAULT, and OMPIL_HAN

- **Large message**
  - Message size (bytes) vs. Time (us)
  - Data points for Cray, OMPIL_DEFAULT, and OMPIL_HAN
Resilience - User Level Failure Mitigation (ULFM)

- Move the underlying resilient mechanisms outside ULFM/OMPI
  - Failure detector and reliable broadcast in PPRTE
  - Used in OMPI ULFM and SUNY OpenSHMEM
- ULFM 4.0.2u1 released
  - Based on OMPI 4.0.2 (will remain in sync)
- ULFM master follows OMPI master
  - Long transition to integrate ULFM in OMPI master
- Scalable fault tolerant algorithms demonstrated in practice for revoke, agreement, and failure detection (SC’14, EuroMPI’15, SC’15, SC’16)
Open MPI and AWS

Brian Barrett

AWS
Elastic Fabric Adapter (EFA)

- EFA is AWS’s HPC/ML-oriented NIC
  - First NIC requiring Libfabric with Open MPI
  - Lots of Libfabric development
  - Lots of Open MPI OFI MTL testing
General Improvements

- **TCP BTL**
  - Patches outstanding to fix multi-NIC matching
  - Should make containers and non-routable NICs more predictable

- **AWS Batch Integration**
  - Run Open MPI applications in cloud batch scheduler
Next Year Plans

- Continue performance work
  - OFI MTL
  - Collectives
- Lots and lots of application testing
- You tell us!

IBM Spectrum MPI

Joshua Hursey
IBM
Delivering Robust & Sustained High Performance for Scalable MPI Applications

Accelerated & Enhanced MPI Point-to-Point
- Driving maximum performance from POWER9, InfiniBand, and GPU hardware.
- Supports direct transfer of GPU buffers between GPUs and across the InfiniBand network.

Dynamic & Optimized MPI Collectives
- Best algorithm selected per call at runtime.
- Includes Power optimized and hardware accelerated (e.g., SHARP) algorithms.

Usability Features Targeting Installation, Startup, Debugging, and Profiling
- Scalable to thousands of nodes and nearly a million processes!

Integration with IBM solutions such as LSF, ESSL, and Spectrum Scale

Built on the open source Open MPI project with IBM value add and IBM service and support

IBM Messaging Software based on Open MPI
IBM added functionality
Collective Library, PAMI Network Driver, Power Architecture Tuning, Cluster Test Tools, Packaging for ISV/OEM models, GPU optimizations, Integrated Performance Analysis Tools and more...

Spectrum MPI 10.3 is based on Open MPI 4.0.x with PMIx 3.1.x

Spectrum MPI Community Edition Available In Dec.!

When transferring GPU buffers across servers, **Spectrum MPI automatically switches** between GPUDirect RDMA and host staged protocols to **deliver the best bandwidth performance for all message sizes.**
Two different container modes commonly used in HPC environments

**Rank Contained mode**
One container per application process

**Fully Contained mode**
One container per node

- `mpirun -np 6 -container rank ...
- `mpirun -np 6 -container all ...
Where do we need help?

- Code
  - Any bug that bothers you
  - Any feature that you can add
- *User documentation*
- Testing (CI, nightly)
- Usability
- Release engineering
