

Screencast: Basic Architecture and Tuning

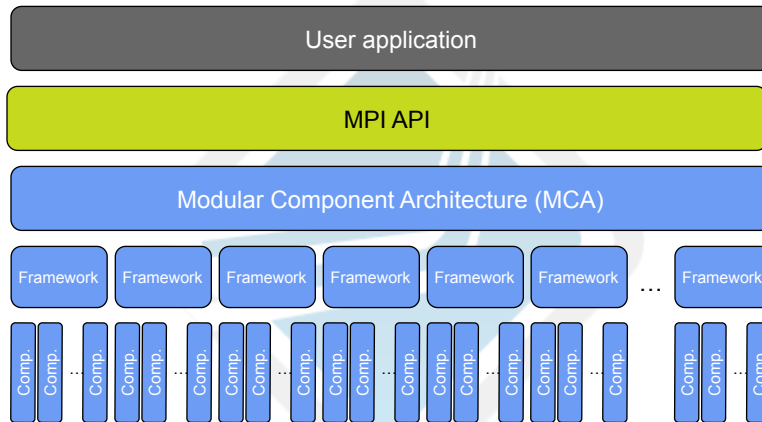

Jeff Squyres
May 2008

Open MPI Architecture

- Modular component architecture (MCA)
 - Backbone plugin / component system
 - Finds, loads, parameterizes components
- Hierarchy
 - MCA: foundation
 - Framework: functionality specification
 - Component: code for specific functionality
 - Module: “instance” of a component

Open MPI Architecture

May 2008

Screencast: Basic Architecture and Tuning 3

Three Main Code Sections

- Open MPI layer (OMPI)
 - Top-level MPI API and supporting logic
- Open Run-Time Environment (ORTE)
 - Interface to back-end run-time system
- Open Portability Access Layer (OPAL)
 - OS / utility code (lists, reference counting, etc.)
- Dependencies - not layers
 - OMPI → ORTE → OPAL

Screencast: Basic Architecture and Tuning 4

Three Main Code Sections

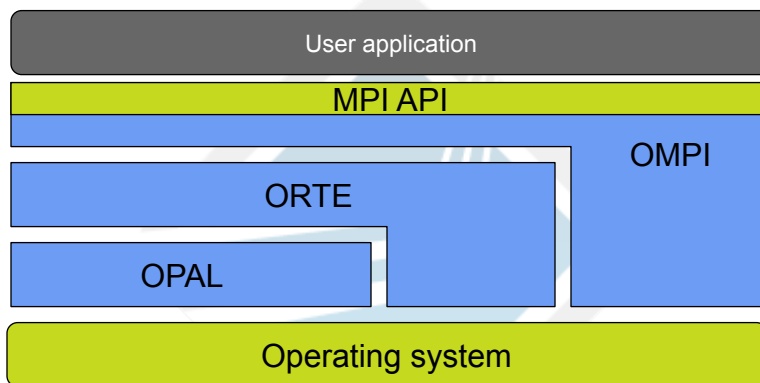

May 2008

Screencast: Basic Architecture and Tuning 5

Three Main Code Sections

May 2008

Screencast: Basic Architecture and Tuning 6

Tuning

May 2008

Screencast: Basic Architecture and Tuning 7

MCA Parameters

- Run-time tunable values
 - Per layer
 - Per framework
 - Per component
- Change behaviors of code at run-time
 - Does *not* require recompiling / re-linking
- Simple example
 - Choose which network to use for MPI communications

May 2008

Screencast: Basic Architecture and Tuning 8

MCA Parameter Lookup Order

1. mpirun command line

```
mpirun --mca <name> <value>
```

2. Environment variable

```
export OMPI_MCA_<name>=<value>
```

3. File

- \$HOME/.openmpi/mca-params.conf
- \$prefix/etc/openmpi-mca-params.conf
(these locations are themselves tunable)

4. Default value

May 2008

ScreenCast: Basic Architecture and Tuning 9

So Much Information...

- Open MPI has:
 - ~30 frameworks
 - 100+ components
 - Each component has run-time tunable parameters
- How to know what to use / how to use it?

May 2008

ScreenCast: Basic Architecture and Tuning 10

ompi_info Command

- Tells everything about OMPI installation
 - Finds all components and all params
 - Great for debugging
- Can look up specific component

```
ompi_info --param <type> <plugin>
```

- Shows parameters and **current** values
 - Can also use keyword “all”
- “--parsable” option

May 2008

Screencast: Basic Architecture and Tuning 11

Example: Specify BTL

- BTL: Byte Transfer Layer
 - Framework for MPI point-to-point communications
 - Select which network to use for MPI communications

```
mpirun --mca btl tcp,self \  
-np 4 ring_c
```

- Framework-level MCA parameter
 - Specifies which components to load

May 2008

Screencast: Basic Architecture and Tuning 12

Example: Specify TCP BTL

```
mpirun --mca btl tcp,self -np 4 ring_c
```

- Components
 - tcp: TCP sockets
 - self: Process loopback (send-to-self)

May 2008

ScreenCast: Basic Architecture and Tuning 13

Example: Specify openib BTL

```
mpirun --mca btl openib,self -np 4  
ring_c
```

- Components
 - openib: OpenFabrics verbs
 - self: Process loopback (send-to-self)

May 2008

ScreenCast: Basic Architecture and Tuning 14

Example: Specify sm+openib BTLs

```
mpirun --mca btl sm,openib,self -np 4  
ring_c
```

- Components
 - openib: OpenFabrics verbs
 - self: Process loopback (send-to-self)
 - **sm**: Shared memory (on-host communication)

What Does This Do?

```
mpirun -np 4 ring_c
```

What Does This Do?

```
mpirun -np 4 ring_c
```

- Use **all** available components
 - tcp, sm, openib, ...
- TCP too?
 - Yes -- and no
 - TCP will automatically disable itself in the presence of low latency components (e.g., openib)

May 2008

Screencast: Basic Architecture and Tuning 17

What Does This Do?

```
mpirun -np 4 ring_c
```

- More specifically:
 - Open each BTL component
 - Query if it wants to be used
 - Keep all that say "yes"
 - Rank by bandwidth and latency rating

May 2008

Screencast: Basic Architecture and Tuning 18

What Does This Do?

```
mpirun -np 4 --mca btl ^tcp ring_c
```

May 2008

Screencast: Basic Architecture and Tuning 19

What Does This Do?

```
mpirun -np 4 --mca btl ^tcp ring_c
```

- Use all available components **except tcp**
- More specifically:
 - Open each BTL component **except tcp**
 - Query if it wants to be used
 - Keep all that say “yes”
 - Rank by bandwidth and latency rating

May 2008

Screencast: Basic Architecture and Tuning 20

openib BTL Parameters

```
ompi_info --param btl openib
```

- Shows all openib BTL MCA parameters
 - ...there are a lot!
- Also try:

```
ompi_info --param btl openib \  
--parsable
```

- What do they all mean?
